protein modification
microtubule-based movement
G-protein coupled receptor protein
ER to Golgi vesicle-mediated transport
cellular physiological process
cell cycle
signal transduction
microtubule cytoskeleton organization and biogenesis
chromosome segregation
protein folding
proteolysis
mitosis
nuclear mRNA splicing, via
microtubule-based process
establishment and/or maintenance of chromatin architecture
cytoskeleton organization and biogenesis
ubiquitin-dependent protein
Unknown
intracellular protein transport
protein biosynthesis
transport
regulation of transcription, DNA-
protein transport
regulation of progression through mitotic cell cycle
small GTPase mediated
