Figure S1. Patients grouping (left) and Kaplan-Meier survival curves (right) in Uppsala (top) and Stockholm (bottom). Patients grouping: Black dots indicate low-risk patients and red dots high risk patients. The horizontal lines are the cut-off of 2D data-driven grouping. Kaplan-Meier curves: The solid lines corresponds to gene synergy, the dashed lines corresponds to TNFAIP1 and the dotted lines to TMEM97.
Figure S2. Patients grouping (left) and Kaplan-Meier survival curves (right) in Uppsala (top) and Stockholm (bottom). Patients grouping: Black dots indicate low-risk patients and red dots high risk patients. The horizontal lines are the cut-off of 2D data-driven grouping. Kaplan-Meier curves: The solid lines corresponds to gene synergy, the dashed lines corresponds to SARM1 and the dotted lines to TMEM199.
