**Version:** 12 **Date:** 7 Jan 2003

Dear Dr Emma Veitch,

I am resubmitting the manuscript with all the possible modifications as suggested by referees. I am providing point wise clarification below.

1. All the results in the manuscript have been recalculated and depicted in the table in the form of median and interquartile range(IQR)
2. Insignificant results from page no 7 ( $P > 0.05$ ) has been deleted.
3. On the basis of point 3rd ANOVA and Bonferroni's methods have been used for the comparison of each individual experiment and results are mentioned in Table 2 and 3.
4. Table 1 is corrected.
5. All the corrections have been done in the background, methods and results section of the abstract.
6. In addition with the correction of underlined error in the main manuscript (Background, Para-1, Line-7. Material method, Page 4, Line 4, Page 6 and Line 11-14 of Page 7) I have also taken careful attention in making the manuscript errorless.

I am looking forward for your favourable response

With regards  
Yours sincerely  
Suraksha Agrawal
