Version: 2 **Date:** 18 Dec 2002

Reviewer: Dr Caroline Homer

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept without revision

Thank you for the opportunity to comment on the revised manuscript which now has a new title. I am satisfied with the authors responses to my comments made previously. The manuscript is much improved with the changes made. The revised title: "Women's opinions on antenatal care in developing countries: Results of a study in Cuba, Thailand, Saudi Arabia and Argentina" is a better reflection of the content of the paper.

I recommend that the manuscript be published in its revised form.
