

Reviewer's report

Title: Is it worth investing in mental health promotion and prevention of mental illness? A systematic review of the evidence from economic evaluations

Version: 2 Date: 18 September 2007

Reviewer: Filip Smit

Reviewer's report:

General

The revision of the MS is satisfactory. I've found all the issues that I had raised addressed well.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None required.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

All looks well.

Discretionary Revisions (which the author can choose to ignore)

None to be mentioned. I am glad that this interesting paper has become more factual after deleting sections on the so called holistic approach. This helped to get the key-message across, without side-tracking the attention of the readership into methodological excursions.

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests, and wish the authors the best of luck!
