Title: Osteogenesis Imperfecta: a nomenclature (re-named to Syndromes with congenital brittle bones)

Version: 3 **Date:** 3 August 2004

Reviewer: raoul engelbert

Reviewer's report:

General

I read the manuscript of Plotkin and my major concerns have been addressed. In my opinion the manuscript is suitable for publication. The manuscript will be essential in the field of OI research and the advice of the author to make a discussion group concerning this topic is essential. Although this is not the topic of the manuscript, I wonder how the affected children and parents will benefit from this proposed classification, since there seems to be few links with current and future functional outcome.
