Author's response to reviews:

Dear Catherine Olino
Journal Editorial Office
BioMed Central

In response to the Ethics requests, we have added the following statements to the Methods section of our revised manuscript:

All the participants recruited into the study gave their informed consent. The study protocol (ref. 06/S1102/51) was reviewed and approved by the Lothian Local Research Ethics Committee 2, NHS.

We hope this will suffice and will allow you to process our submission.

Regards

Dr Mario A Parra (on behalf of all authors)
