Erratum

Chu T, Ebright J, Ellington AD: Using aptamers to identify and enter cells.

In this review, Figure 2 should have been represented as follows:

(A) Aptamers were chemically modified with 3' biotins and conjugated via a streptavidin bridge to biotinylated RNAs that served as binding sites for a short siRNA directed against a target gene [59]. (B) Aptamers were synthesized chemically with an extended 3' tail that included a binding site for a short siRNA directed against a target gene [60]. PSMA prostate-specific membrane antigen.
