Reviewer's report

Title: Multifactorial Approach to Understand Dizziness In Community-Dwelling Elderly People: A Cross Sectional Population Based Study

Version: 1 Date: 29 September 2012

Reviewer: Chiara Mussi

Reviewer's report:

No major/minor compulsory revisions. The paper is really well written, the aim of the study is clear, the study is methodologically well-built. The statistical analysis is correct. The results and tables are complete and easy to understand. The discussion is pertinent with the results, with a great work of searching for good references.

Minor revisions: Page 22: pay attention to the 28th reference (just an editing problem)
There are some minor problems in English language:
Abstract. Background, line 5: better “relationship” than “interrelationships”.
Background. Line 1: better “older adults” than “elderly adults”

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
