Reviewer’s report

Title: Primary nasopharyngeal tuberculosis: a case report

Version: 1 Date: 01 Dec 2015

Reviewer: Frédéric J. Veyrier

Reviewer's report

In this article Nakao et al. provide evidence of Nasopharyngeal primary tuberculosis. Although some interesting facts are demonstrated in this article some other are missing (such as the lung X ray, culture).

Comments:

- Is it possible to provide the lung CT scan proving support for primary nasopharyngeal TB

- Did you cultivate the bacteria? It seems to me that in Japan culture is the gold standard. Please clarify.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
