Author's response to reviews: see over
Dear Editor,

May we submit the re-revised manuscript, entitled *Furosemide-induced severe hypokalemia with rhabdomyolysis without cardiac arrest* for publication as a case report for *BMC Women’s Health*.

The following changes have been made according to the suggestions of reviewer 2:

**Major revisions**
1. That the laboratory findings were atypical for furosemide-induced hypokalemia, is mentioned in the introduction and in the fourth paragraph of the discussion.
2. Vital signs at admission are reported.

**Minor revisions**
1. Several spelling and grammar errors have been corrected.
2. The number of references cannot be reduced due to the complexity of the case.
3. Abbreviations have been omitted or defined in abstract, text and table.

All authors have read and approved the final manuscript. The paper has not been published and is not being considered for publication elsewhere. None of the paper's contents have been previously published. All authors fulfill the criteria for authorship and all those who fulfill these criteria are included as authors. There is no financial or other conflict of interest that might have biased our work.

Yours sincerely

Claudia Stöllberger, corresponding author
