Author’s response to reviews:

Dear editor,

On behalf of my co-authors, thank you to receive the manuscript titled “Impact of Renal Dysfunction on long-term Outcomes of elderly patients with Acute Coronary Syndrome” submitted for publication in your journal. With the advance of population aging, the morbility of chronic kidney disease (CKD) developed. CKD is strongly associated with very high mortality rates and accelerated cardiovascular disease (CVD). This study was undertaken to evaluate the effect of renal dysfunction (RD) on clinical outcomes that include death, complication and major adverse cardiac events (MACEs) in elderly patients with ACS. All authors have fully reviewed the final version of the manuscript and approved its submission. The paper is not under consideration elsewhere and none of the paper’s contents have been previously published. There are no conflicts of interest.
