Author's response to reviews: see over
Dear Dr. Norton,

Attached please find revised version of our manuscript entitled “Osteopoikilosis and multiple exostoses caused by novel mutations in LEMD3 and EXT1 genes respectively - coincidence within one family.” We would like to submit this to the journal: BMC Medical Genetics.

As requested we changed wording of the consent declaration in Methods section which now states:

“The local ethics committee approved the study and written, informed consent was obtained from all participants or their legal guardians for publication of this case report and accompanying images. Copies of all written consents are available for review on request.”

I hope that the manuscript can now be submitted for the peer review process.

I hereby declare that there is no conflict of interest.

Sincerely

Mateusz Kolanczyk
